TABLE OF CONTENTS

EXECUTIVE SUMMARY iii
1 INTRODUCTION iii
2 THEORETICAL BASES iii
3 TYPES OF BOUNDARY CONDITIONS iv
4 OPTIONAL NUMERICAL METHODS AND STRATEGIES iv
5 DESIGN CAPABILITY OF WASH123D v
6 EXAMPLE PROBLEMS vi

1 INTRODUCTION 1-1
1.1 Multimedia 1-1
1.2 Multi-Processes 1-3
1.3 Theoretical Bases in WASH123D 1-4
1.3.1 Governing Equations 1-4
1.3.2 Boundary Conditions 1-5
1.3.3 Numerical Methods 1-6
1.4 Design Capability of WASH123D 1-7
1.5 Organization of this Report 1-7

2 MATHEMATICAL BASIS 2-1
2.1 Water Flow in One-Dimensional River/Stream/Canal Network 2-1
2.1.1 Fully Dynamic Wave Approaches 2-2
2.1.2 Diffusive Wave Approaches 2-13
2.1.3 Kinematic Wave Approaches 2-18
2.1.4 Thermal Transport 2-19
2.1.5 Salinity Transport 2-22
2.2 Water Flow in Two-Dimensional Overland Regime 2-25
2.2.1 Fully Dynamic Wave Approaches 2-26
2.2.2 Diffusive Wave Approaches 2-34
2.2.3 Kinematic Wave Approaches 2-36
2.2.4 Thermal Transport 2-36
2.2.5 Salinity Transport 2-38
2.3 Water Flow in Three-Dimensional Subsurface Media 2-40
2.3.1 Water Flow 2-40
2.3.2 Thermal Transport 2-43
2.3.3 Salinity Transport 2-45
2.4 Coupling Fluid Flows Among Various Media 2-46
2.4.1 Coupling between River/Stream/Canal and Overland Flows 2-48
2.4.2 Coupling between Overland and Subsurface Flows 2-51
2.4.3 Coupling between Subsurface and River/Stream/Canal Flows 2-53
2.5 Sediment and Water Quality Transport in 1D River/Stream/Canal Networks 2-55
2.5.1 Bed Sediment 2-56
2.5.2 Suspended Sediments 2-58
2.5.3 Immobile Species 2-59

2.5.4 Mobile Species 2-60
2.5.5 Diagonalization of Species Transport Equations 2-62
2.6 Sediment and Water Quality Transport in Two-Dimension Overland Regime 2-67
2.6.1 Bed Sediment 2-68
2.6.2 Suspended Sediments 2-70
2.6.3 Immobile Species 2-72
2.6.4 Mobile Species 2-73
2.6.5 Diagonalization of Species Transport Equations 2-75
2.7 Reactive Biogeochemical Transport in Three-Dimension Subsurface Media 2-80
2.7.1 Immobile Species 2-81
2.7.2 Mobile Species 2-81
2.7.3 Diagonalization of Species Transport Equations 2-83
2.8 Coupling Transport Among Various Media 2-88
2.8.1 Coupling between Overland Transport and River/StreamNetworks 2-88
2.8.2 Coupling between Subsurface and Overland Transport 2-91
2.8.3 Coupling between Subsurface and River/Stream/Canal Transport 2-92
2.8.4 Coupling of Reactive Transport between Groundwater and Surface water 2-93
3 NUMERICAL APPROACHES 3-1
3.1 Solving One-Dimensional River/Stream/Canal Network Flow Equations 3-1
3.1.1 The Lagrangian-Eulerian Finite Element Method for Dynamic Wave 3-1
3.1.2 Numerical Approximations of Diffusive Wave Approaches. 3-13
3.1.3 The Semi-Lagrangian Method for Kinematic Wave 3-23
3.1.4 Numerical Approximations of Thermal Transport 3-24
3.1.5 Numerical Approximations of Salinity Transport 3-31
3.2 Solving the Two-Dimensional Overland Flow Equations 3-38
3.2.1 The Lagrangian-Eulerian Finite Element Method for Dynamic Waves 3-38
3.2.2 Numerical Approximation of Diffusive Wave Equations 3-46
3.2.3 The Semi-Lagrangian Method for Kinematic Wave 3-50
3.2.4 Numerical Approximations of Salinity Transport 3-56
3.3 Solving the Three-Dimensional Subsurface Flow Equations 3-61
3.3.1 Finite Element Approximations of the Flow Equations 3-62
3.3.2 Numerical Approximations of Thermal Transport Equations 3-68
3.3.3 Numerical Approximations of Salinity Transport 3-74
3.4 Numerical Implementation of Flow Coupling among Various Media 3-78
3.4.1 Coupling between 1-D River Networks and 2-D Overland Flows 3-79
3.4.2 Coupling between 2-D Overland and 3-D Subsurface Flows 3-84
3.4.3 Coupling between 3-D Subsurface and 1-D Surface Flows 3-87
3.4.4 Coupling Among River, Overland, and Subsurface Flows 3-92
3.5 Solving One-Dimensional River/Stream/Canal Network Water Quality Transport Equations 3-97
3.5.1 One-Dimensional Bed Sediment Balance Equation 3-98
3.5.2 Application of the Finite Element Method to the Conservative Form of the Sediment Transport Equations to Solve 1-D Suspended

Sediment Transport 3-98
3.5.3 Application of the Finite Element Method to the Advective Form of the Transport Equations to Solve 1-D Suspended Sediment Transport 3-102
3.5.4 Application of the Modified Lagrangian-Eulerian Approach to the Largrangian Form of the Transport Equations to Solve 1-D Suspended Sediment Transport 3-105
3.5.5 Aplication of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Conservative Form of the Transport Equations for the Upstream Flux Boundaries to Solve 1-D Suspended SedimentTransport 3-109
3.5.6 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Advective Form of the Transport Equations for the Upstream Flux Boundaries to Solve 1-D Suspended Sediment Transport 3-110
3.5.7 Finite Application of the Finite Element Method to the Conservative Form of the Transport Equations to Solve 1-D Kinetic Variable Transport 3-110
3.5.8 Finite Application of the Finite Element Method to the Advective Form of the Transport Equations to Solve 1-D Kinetic Variable 3-124
3.5.9 Application of the Modified Lagrangian-Eulerian Approach to the Largrangian Form of the Transport Equations 3-133
3.5.10 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Conservative Form of the Transport Equations for the Upstream Flux Boundaries to Solve 1-D Kinetic Variable Transport 3-148
3.5.11 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Advective Form of the Transport Equations for the Upstream Flux Boundaries to Solve 1-D Kinetic Variable Transport 3-148
3.6 Solving Two-Dimensional Overland Water Quality Transport Equations .. 3-149
3.6.1 Two-Dimensional Bed Sediment Balance Equation 3-149
3.6.2 Application of the Finite Element Method to the Conservative Form of the Transport Equations to Solve 2-D Suspended Sediment Transport 3-150
3.6.3 Application of the Finite Element Method to the Advective Form of the Transport Equations to Solve 2-D Suspended ediment Transport 3-152
3.6.4 Application of the Modified Lagrangian-Eulerian Approach to the Largrangian Form of the Transport Equations to Solve 2-D Suspended Sediment Transport 3-155
3.6.5 Application of the Lagrangian-Eulerian Approach for All Interior

Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Conservative Form of the Transport Equations for the Upstream Flux Boundaries to Solve 2-D Suspended Sediment Transport 3-159
3.6.6 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Advective Form of the Transport Equations for the Upstream Flux Boundaries to Solve 2-D Suspended Sediment Transport..... 3-159
3.6.7 Application of the Finite Element Method to the Conservative Form of the Transport Equations to Solve 2-D Kinetic Variable Transport 3-159
3.6.8 Application of the Finite Element Method to the Advective Form of the Transport Equations to Solve 2-D Kinetic Variable Transport . 3-166
3.6.9 Application of the Modified Lagrangian-Eulerian Approach to the Largrangian Form of the Transport Equations to Solve 2-D Kinetic Variable Transport 3-171
3.6.10 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Conservative Form of the Transport Equations for the Upstream Flux Boundaries to Solve 2-D Kinetic Variable Transport 3-177
3.6.11 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Advective Form of the Transport Equations for the Upstream Flux Boundaries to Solve 2-D Kinetic Variable Transport 3-177
3.7 Solving Three-Dimensional Subsurface Water Quality Transport Equations..... 3-178
3.7.1 Application of the Finite Element Method to the Conservative Form of the Reactive Chemical Transport Equations..... 3-178
3.7.2 Application of the Finite Element Method to the Advective Form of the Reactive Transport Equations..... 3-186
3.7.3 Operator-Splitting Approach 3-194
3.7.4 Application of the Modified Lagrangian-Eulerian Approach to the Largrangian Form of the Reactive Transport Equations..... 3-194
3.7.5 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Conservative Form of the Reactive Transport Equations for the Upstream Flux Boundaries 3-204
3.7.6 Application of the Lagrangian-Eulerian Approach for All Interior Nodes and Downstream Boundary Nodes with the Finite Element Method Applied to the Advective Form of the Reactive Transport Equations for the Upstream Flux Boundaries 3-204
3.8 Numerical Implementation of Reactive Transport Coupling among Various Media..... 3-205

3.8.1 Coupling between 1D-River and 2D-Overland Water Quality Transport 3-205
3.8.2 Coupling between 2D-Overalnd and 3D-Subsurface Water Quality Transport 3-209
3.8.3 Coupling between 3-D Subsurface and 1-D Surface Flows 3-211
3.8.4 Coupling Among River, Overland, and Subsurface Flows 3-214
3.9 Vastly Different Time Scales among Various Media 3-217

4 HYDRLOGY AND HYHRAULICS FLOW EXAMPLES 4-1
4.1 Design Capability of WASH123D 4-1
4.1.1 One-Dimensional Flows in River/Stream/Canal Networks 4-1
4.1.2 Two-Dimensional Overland Flows Complex Topography 4-5
4.1.3 Three-Dimensional Variably Saturated Flows in Subsurface Media. 4-11
4.1.4 Coupled One-Dimensional and Two-Dimensional Flows. 4-15
4.1.5 Coupled Two-Dimensional and Three-Dimensional Flows. 4-20
4.1.6 Coupled Three-Dimensional and One-Dimensional Flows. 4-26
4.1.7 Coupled One-Dimensional, Two-Dimensional, and Three-Dimensional Flows. 4-30
4.2 Three Optional Approaches to Modeling Flow in WASH123D 4-40
4.2.1 One-Dimensional River Flows 4-40
4.2.2 Two-Dimensional Overland Flows. 4-43
4.2.3 Circular Dam Break Problems. 4-45
4.2.4 Two-Dimensional Dam Break Problems. 4-49
4.3 Preliminary Field Applications Using WASH123D 4-52
4.3.1 Aquifer Storage Recover (ASR) 4-52
4.3.2 Design of a Spread Canal 4-58
4.3.3 Biscayne Bay Coastal Wetland (BBCW) Watershed Modeling. 4-66
4.3.4 Stormwater Treatment Area. 4-72
4.3.5 Reservoir and Canal Networks Modeling for Evaluations of Storage Values in Northern Beach County in Florida. 4-79
4.3.6 Dade County Watershed Modeling. 4-90

5 WATER QUALITY TRANSPORT EXAMPLES 5-1
5.1 One-Dimensional Examples 5-1
5.1.1 Comparison of Options to Solve Advective-dispersive Transport Equations 5-1
5.1.2 Comparison of Coupling Strategies to Deal with Reactive Chemistry 5-3
5.1.3 Chemical Transport with Complexation, Sorption and Dissolution reactions 5-5
5.1.4 River/Stream Transport with all Ten Types of Reactions 5-11
5.1.5 River/Stream Transport with Eutrophication 5-15
5.1.6 River/Stream Transport with Junction 5-18
5.2 Two-Dimensional Examples 5-24
5.2.1 Overland Transport with Ten Types of Reactions 5-24
5.2.2 Overland Transport with Eutrophication in QUAL2E 5-30
5.2.3 Overland Transport with Eutrophication in WASP5 5-37

5.2.4 Overland Transport with Eutrophication in CE-QUAL-ICM 5-40
5.2.5 Discussions on Diagonalization Approaches to Water Quality Modeling 5-43
5.3 Three-Dimensional Examples 5-47
5.3.1 Packed Column Breakthrough Curve Simulation for Uranium (VI) Sorption 5-48
5.3.2 Undisturbed Column Breakthrough Curve Simulation for Uranium (VI) Sorption 5-52
5.3.3 Three-dimensional Reactive Uranium Transport Simulation 5-57

6 SUMMARY AND DISCUSSION 6-1
6.1 Summary 6-1
6.2 Discussion 6-2

Northern Beach County 4-79
Fig. 4.3.5-2. Schematic Diagram of an On-line Reservoir/Lake 4-81
Fig. 4.3.5-3. Schematic Diagram of an Off-line Reservoir/Lake..... 4-82
Fig. 4.3.5-4. Model layout of Northern Palm Beach County: Storage Values 4-83
Fig. 4.3.5-5. Canal Reaches in the Model..... 4-84
Fig. 4.3.5-6. Hydrograph at structure G-92 from 1/1/95 through 12/1/95..... 4-89
Fig. 4.3.5-7. Hydrograph at Lainhart Dam from 1/1/95 through 12/1/95..... 4-89
Fig. 4.3.6-1. 3-D Subsurface Media Finite Element Mesh 4-90
Fig. 4.3.6-2. 2-D Overland Regime Finite Element Mesh..... 4-91
Fig. 4.3.6-3. Canal Network..... 4-91
Fig. 4.3.6-4. Total Head at Steady State Subsurface Flow (feet)..... 4-92
Fig. 4.3.6-5. Total Head Distribution (feet) at time=13,680 minutes (9.5 days) 4-92
Fig. 4.3.6-6. Overland Water Depth (feet) at time = 7,000 minutes (4.86 days 4-93
Fig. 5.1-1. Concentration Profiles of CMW in Cases 1, 2, and 3 of Example 5.1..... 5-2
Fig. 5.1-2. Concentration Profiles of CMW in Cases 4 and 5 of Example 5.1..... 5-3
Fig. 5.1-3. Concentration Profiles of CMW in Cases 1, 2, and 3 of Example 5.2..... 5-5
Fig. 5.1-4. Concentration Profiles for Species M, C_1, and S_1 for Example 5.1-3..... 5-10
Fig. 5.1-5. Concentration Profiles of Various Species for Example 5.1-4 5-14
Fig. 5.1-6. Concentration Profiles of PHYT, $PHYT_{(b)}$, DO, and $DO_{(b)}$) for Example 5.1.5 5-18
Fig. 5.1-7. River/stream Network for Example 5.1.6 5-19
Fig. 5.1-8. Concentration of the Suspended Sediment for example 5.1.6 5-21
Fig. 5.1-9. Concentration of the Bed Sediment for Example 5.1.6..... 5-21
Fig. 5.1-10. Concentration of Dissolved Chemical in Mobile Water for Example 5.1.6 5-22
Fig. 5.1-11. Concentration of Dissolved Chemical in Immobile Water for Example 5.1.6 5-22
Fig. 5.1-12. Concentration of Particulate on Suspended Sediment for example 5.1.6 . 5-23
Fig. 5.1-13. Concentration of Particulate on Bed Sediment for example 5.1.6..... 5-23
Fig. 5.2-1. Distribution of Temperature (ºC) for Example 5.2.1 5-25
Fig. 5.2-2. Concentration of SS (g/m^3) for Example 5.2.1 Upper: case 1; Lower: case 2 5-28
Fig. 5.2-3. Concentration of CMW1 (g/m^3) for Example 5.2.1..... 5-29
Fig. 5.2-4. Concentration of CIMW1 (g/m^3) for Example 5.2.1 5-29
Fig. 5.2-5. Simulation Domain Descretization for Example 5.2.2 5-35
Fig. 5.2-6. Water Depth (m) at Various Times for Example 5.2.2: 5-35
Fig. 5.2-7. Flow Velocity (m/s) at Various Times for Example 5.2.2: 5-36
Fig. 5.2-8. Concentration Contours at 1hour (left) and 720 h (right) in Example 5.2.2: 5-37
Fig. 5.2-9. Concentration Contours at 1hour (left) and 60T (right) in Example 5.2.3 5-39
Fig. 5.2-10. Concentration of PO_4d (mg-P/L) in Example 5.2.4 5-42
Fig. 5.2-11. Concentration of Algae (mg-C/L) at 1 hour (Left) and 5T (Right)..... 5-43
Fig. 5.3-1. Simulation Domain and Descretization for Example 5.3.1..... 5-48
Fig. 5.3-2. U(VI) Breakthrough Curve for the Packed Column 5-49
Fig. 5.3-3. Simulation Domain and Descretization for Example 5.3.2..... 5-53

Fig. 5.3-4. U(VI) Breakthrough Curve for the Undisturbed Column 5-54
Fig. 5.3-5. Simulation Domain and Descretization for Example 5.3.3..... 5-57
Fig. 5.3-6. Simulated Concentration Fringes at Time = 100 years for Example 5.3.3 5-59

LIST OF TABLES

Table 4.1.1-1 Partial numerical results of water depth distribution at Time = 7,200 s 4-5
Table 4.1.2-1 Partial numerical results of water depth at Time = 1,800 s and 3,600 s 4-10
Table 4.1.3-1 Partial Numerical Results of Pressure Head 4-14
Table 4.1.5-1 Partial Results of Water Depth along the x-Direction for Example 4.1.5 4-26
Table 4.3.2-1 Upstream Water Depth Boundary Condition used for the 1D Canal Flow 4-61
Table 4.3.2-2 Three Cases in the Demonstration Example 4-64
Table 4.3.3-1 Estimated Hydraulic Conductivity for Initial Guesses in Calibration 4-69
Table 4.3.4-1 Value of Hydraulic Conductivity Used in the Simulation 4-75
Table 4.3.5-1 Internal Boundary Conditions 4-80
Table 4.3.5-2 External Boundary Conditions 4-81
Table 4.3.5-3 Surface water data for model calibration 4-86
Table 4.3.5-4 Measured cumulative flow in 1995 4-86
Table 4.3.5-5 Gate opening at Structure G-92 4-86
Table 4.3.5-6 Cumulative flow through different structures 4-87
Table 4.3.5-7 Cumulative flow through Lainhart Dam compared with field data 4-87
Table 4.3.5-8 Percent of time the target minimum flow is met at Lainhart Dam 4-87
Table 4.3.5-9 Percent of time the target minimum flow is met. 4-88
Table 5.1-1 Reaction Network for Example 5.1-3 5-6
Table 5.1-2 Kinetic-variable Transport Equations for Example 5.1-3 5-7
Table 5.1-3 Equilibrium Reaction Algebraic Equations for Example 5.1-3 5-8
Table 5.1-4 Initial and Boundary Concentrations for Example 5.1-3 5-9
Table 5.1-5 Chemical Reactions Considered in Example 5.1.4 5-12
Table 5.1-6 Equations Obtained through Decomposition in Example 5.1-4 5-13
Table 5.1-7 Chemical Species in Example 5.1.5 5-16
Table 5.2-1 Chemical Reactions Considered in Example 5.2.1 5-26
Table 5.2-2 Equations Obtained through Decomposition in Example 5.2.1 5-27
Table 5.2-3 QUAL2E Original Working Equations 5-30
Table 5.2-4 QUAL2E Eutrophication Model Cast in Reaction Network 5-31
Table 5.2-5 QUAL2E Example Reaction Coefficients 5-32
Table 5.2-6 QUAL2E Example Reaction Rate Parameters 5-32
Table 5.2-7 New Paradigm Working Equations for QUAL2E 5-34
Table 5.2-8 Initial and Boundary Concentration in Example 5.2.2 5-36
Table 5.2-9 Species Initial and Boundary Concentration in Example 5.2.3 5-38
Table 5.2-10 Species Initial and Boundary Concentration in Example 5.2.4 5-41
Table 5.2-11 Comparison of QUAL2E, WASP5, and CE-QUAL-ICM 5-44
Table 5.2-12 Governing Equations for the Reaction-based Diagonalization Approach 5-47
Table 5.3-1 Chemical Reactions Considered in Example 5.3.1 5-50
Table 5.3-2 Kinetic-variable Transport Equations Solved in Example 5.3.1 5-51

Table 5.3-3 Equilibrium Reaction Algebraic Equations Solved in Example 5.3.1 5-52
Table 5.3-4 Kinetic-variable Transport Equations Solved in Example 5.3.2 5-55
Table 5.3-5 Equilibrium Reaction Algebraic Equations Solved in Example 5.3.2 5-56
