

Beyond Housing Damage: The Social Dynamics of Flood-Related Mobility

Eleonora Panizza, PhD - CIMA Research Foundation

www.cimafoundation.org

Understanding the Drivers of Flood Mobility

Research Objectives:

- Investigate local dynamics.
- Support EWS and decision-making.
- Improve mobility modeling accuracy.

Sudan

Mozambique

Fieldwork in Mozambique

Data collection:

- July 2025.
- Buzi & Guara Guara.
- 428 household surveys.
- 6 local enumerators.

Data analysis:

- Reconstruction of 2019 flood event (Cyclone Idai).
- Households' characteristics and mobility dynamics.
- Improving EWS (local & national).
- Comparative analysis with Sudan.

Preliminary Findings: Damage and Displacement

Severe Flood Damage

Displacement Rate

Preliminary Findings: Warnings and Displacement

Exposure to Alerts & Evacuation Orders

Timing of displacement

Preliminary Findings: Fear and Trust

Further steps: From Local Insights to Global Models

Complete data analysis

Full statistical analysis of population clusters.

Community restitution

Comparative analysis

Similarities and differences between Sudan & Mozambique.

Policy insights

Model enhancement

ABM and probabilistic model calibration

More detailed frameworks

Thank you for the attention!
